

Persia Ink

WATER BASE FLEXOGRAPHIC INK ADDITIVES

DEFOAMER 00AFW7038

The flow of ink fall in the pump return , the hardness of water quality and the pump type, foaming problem may occur . in this case we advise to add up to %2 defoamer 00AFT 7038

REDUCER 00FWB8529

To reduce the ink to proper viscosity and to improve the gloss and rub resistance and also to lower the colour density for high absorbent paper add %10 reducer 00FWB8529

RETARDER 00SLV8221

In hot season due to the warm weather the drying speed of ink increase and ink may pick the paper particles . adding 5-10% of retarder 00SLV8221 will overcome the problem and yields the best quality .

00SLV7318

Inks may dry in the anilox roller and so the print quality decreases washing anilox roller monthly is essential. 00SLV7318 clean the anilox roller throughly and refresh the roll .

00SLV7032

Water is the best solvent to clean the printing machine but to clean the printing machine throughly specially for charging colour 7032 is helpful and easily clean the machine
